AI OPERATIONS · WITH TYRA

A capable partner at the *center of your day.*

Tell Tyra what needs doing. She keeps your shop's information, appointments, inspections and quotes connected — with saved results you can check.

Shop memory | Bookings | Photo details | Quotes | Products | Email status

Your shop, remembered

Services, hours and your own prices kept in one conversation. Review proposed changes before they're saved.

Appointments, connected

Booking around your hours, service times and capacity, with Google Calendar in the demo. A Tyra phone line handles basic questions and new bookings.

Photos into useful details

Upload vehicle photos. Tyra suggests the VIN, vehicle, tire markings and mileage. Your technician checks them and records real measurements.

Clear inspections & quotes

Technician-reviewed reports, your catalog prices, saved quote versions and customer review links. Approved quotes lead to scheduling.

Products without guesswork

Upload a spreadsheet of what you sell. Review how Tyra maps the columns before import. A listing isn't a stock or fitment guarantee.

Communication you can verify

Appointment emails with delivery status, so you see what happened. In the Acme demo, email goes only to a test address.

HOW IT WORKS

1. Snap or ask → 2. Tyra fills details → 3. Tech confirms → 4. Quote & book

Less time entering details. More time with customers.

ACME DEMONSTRATION · SCOPE AND PRICING BY PROPOSAL

Standard Inspections & Quotes is included in the base offering. Premium photo-based condition analysis is a future add-on, not part of this release. Voice in the demo supports new bookings; it does not promise transfers or changes to existing appointments.
